## PREFACE

The MS., dating from the third century a.d., which is here edited for the first time in a single whole, has long been known to scholars. Its subject-mattermagic and medicine-is not destitute of interest. It is closely connected with the Greek magical papyri from Egypt of the same period, but, being written in demotic, naturally does not reproduce the Greek hymns which are so important a feature of those papyri. The influence of purely Greek mythology also is here by comparison very slight-hardly greater than that of the Alexandrian Judaism which has supplied a number of names of Hellenistic form to the demotic magician. Mithraism has apparently contributed nothing at all: Christianity probably only a deformed reference to the Father in Heaven. On the other hand, as might have been expected, Egyptian mythology has an overwhelmingly strong position, and whereas the Greek papyri scarcely go beyond Hermes, Anubis, and the Osiris legend, the demotic magician introduces Khons, Amon, and many other Egyptian gods. Also, whereas the former assume a knowledge of the modus operandi in divination by the lamp and bowl, the latter describes it in great detail.

But the papyrus is especially interesting for the language in which it is written. It is probably the
latest Egyptian MS．which we possess written in the demotic script，and it presents us with the form of the language as written－almost as spoken－by the pagans at the time when the Greek alphabet was being adopted by the Christians．It must not be forgotten， too，that this is the document which contributed perhaps more than any other to the decipherment of demotic， partly through its numerous Greek glosses．

We have therefore thought that a complete edition， with special reference to its philological importance． would be useful．The vocabulary is extensive，com－ prising about a thousand words．The present volume， containing the introduction，the transliteration，transla－ tion，and notes，will be followed by a complete glossary， with separate indices of Greek words，invocation names， names of animals，plants，and minerals，and a list of the glosses，\＆c．，besides a chapter dealing with the principal grammatical forms met with in the MS．，and a hand－ copy of the text；the photographic reproduction by Hess of the pages in the British Museum and Leemans＇ facsimile of those at Leiden will of course preserve their independent value for reference，as，for instance，in judging the condition of the MS．and the precise forms of the signs in particular passages．

There is considerable inconsistency in the spelling of words in the papyrus itself．So much having to be rendered more or less conventionally，while fresh light is thrown daily on the intricacies of demotic，it is prob－ able that there are a good many inconsistencies in our transliterations，translations，and notes，in spite of the watchfulness of the excellent reader at the Clarendon

Press. Those, however, who have dealt with the subject at all will probably not judge these too hardly.

In conclusion, we have to record our gratitude, first, to our predecessors in publication and decipherment of the papyrus-to Reuvens, Leemans, and Hess, to Brugsch, Maspero, Revillout, and W. Max Miiller-but for whose varied contributions our task would have been infinitely more laborious even in the present advanced state of the study: and secondly, to the authorities of the Egyptian department in the British Museum, and of the Rijksmuseum in Leiden, for their courtesy in affording every facility for studying the original MS., and more especially to Dr. Boeser of the Leiden Museum for much kindness and assistance.

## INTRODUCTION

## I. HISTORY OF THE MS.

The demotic magical papyrus of London and Leiden was discovered at Thebes with other papyri, principally Greek but dealing with subjects of a like nature, in the early part of the last century, and was bought by Anastasi, who was at that time Swedish consul at Alexandria, and made a large collection of Egyptian MSS. When Anastasi obtained the MS. it must already have been torn into two parts, and it is even probable that he obtained the two parts at different times, since he sold his Egyptian collections, including the Leiden MS., to the Dutch government in 1828, while the London portion was bought at the sale of his later collections at Paris in 1857 for the British Museum (No. 1072 in Lenormant's Catalogue).

The Leiden fragment was made known to the world much earlier than that in the British Museum. Its importance for the deciphering of the demotic script by the help of the numerous glosses in Graeco-Coptic characters was at once perceived by the distinguished scholar Reuvens, at that time Director of the Leiden Museum of Antiquities, who proceeded to study it carefully, and in 1830 published an admirable essay ${ }^{1}$ in which he sketched the principal contents of the MS. and indicated its value for the progress of demotic

[^0]studies. He then took in hand its reproduction, and the MS. was lithographed in facsimile under his direction, and he had corrected the proofs of the first plate when he was cut off by a premature death in 1835 ; his work was carried to completion and published by his successor in the Directorship of the Museum, Leemans, in $1839^{1}$. Heinrich Brugsch studied it closely, and drew from it most of the examples quoted in his Demotic Grammar published in 1855; but, although later scholars have frequently quoted from it and translated fragments of it, the MS. has hitherto remained without complete translation, commentary, or glossary.

The London MS., however, lay from 1857 onwards almost unnoticed in the British Museum. To the late Dr. Pleyte, Leemans' successor at Leiden, belongs the credit of discovering that the two MSS. originally formed one. He had studied the Leiden portion, and at once recognized the handwriting of its fellow in London. Without publishing the fact, he communicated it to Professor Hess of Freiburg, when the latter was working in Leiden on the MS. there. Professor Hess went on to London, and, having fully confirmed Dr. Pleyte's statement, published in 1892 a reproduction of the British Museum MS. with an introduction, including the translation of one column, and a glossary ${ }^{2}$.

Reuvens in his essay dwelt at some length on the 'gnostic' character of the MS. He devoted his attention mainly to the parts which contain the glosses, and those are almost exclusively magical invocations, among which occur the names of gods, spirits, and demons, Egyptian, Syrian, Jewish, \&c., strung together in a manner similar
${ }^{1}$ Monuments égyptiens du Musée d'Antiquités des Pays-Bas à Leide: papyrus égyptien démotique à transcriptions grecques I. 383 , publié par le Dr. Conrad Leemans. Leide, 1839.

to those found in gnostic writings and on gnostic gems. He even went so far as to associate them with the name of a particular gnostic leader, Marcus, of the second century, chiefly on the ground of his recorded use of Hebrew and Syriac names in his invocations and the combinations of vowels. In consequence the MS. has acquired the name of the 'Leiden Gnostic,' and the term 'Gnostic' has been passed on to the London MS. But as will be seen from the complete translation here published, there is nothing in the work relating to the gnostic systems-it deals with magic and medicine, and it seems a misnomer to call the MS. gnostic merely because part of the stock-in-trade of the magician and medicine-man were a number of invocation names which he either picked up from the gnostics or derived from sources common to him and them. Hence it has been thought desirable to abandon the epithet 'gnostic,' and to call the work the 'Magical papyrus of London and Leiden' (Pap. mag. LL.).

## II. CONDITION OF THE MS.

The London portion is in far better condition than the Leiden portion. The papyrus is pale in colour and the ink very black; consequently where the MS. has not suffered material damage it is easy to read, as the scribe wrote a beautiful and regular hand.

The Leiden papyrus, on the other hand, has unfortunately suffered much, as Leemans, with a view to protecting the surface, covered both recto and verso with 'vegetable' paper, which probably could not be removed now without serious injury to the MS.; but either the paper or the adhesive matter employed with it has darkened and decayed, rendering the writing illegible in places.

In 1829, while the MS. was still in charge of Reuvens and before it had been subjected to the operation above described, he took a tracing of it which has been preserved, and which, though of little assistance in points of minute detail, may be relied on for filling up with certainty many groups which are now wholly lost in the original.

The main body of the writing is on the recto (horizontal fibres) of the papyrus, while on the verso are written memoranda, medical prescriptions, and short invocations.

The London MS. is Pap. No. roo7o of the British Museum (formerly Anast. 1072).

The Leiden MS. is known as I. 383 (reckoned among the Anastasi MSS. as A. 65).

The London portion forms the initial part of the MS. and joins on to the Leiden portion without a break, the tenth and last column of the London MS. and the first of the Leiden forming one column.

The first London column is imperfect, and it is not possible to say with certainty whether the MS. began with it or whether there was an anterior part now lost. It is quite possible that it began here. On the other hand, it is certain that the MS. is imperfect at the end, since the broken edge of the papyrus at Leiden shows traces of a column of writing succeeding the present final column.

It is impossible to estimate how much is lost, as the MS. is not an original composition on a definite plan, but a compilation of heterogeneous material collected together without any logical order.

The two portions, if joined together, would measure, roughly speaking, some 5 m . (about $16 \frac{1}{2}$ feet) in length. In height it averages nearly 25 cm . (10 in.). The writing is in columns, of which there are twenty-nine on the
recto, while on the verso are thirty-three small columns or portions of columns; but these are not marked off, as are the recto columns, by vertical and horizontal framing lines ${ }^{1}$, nor are they written continuously, but they seem to have been jotted down there on account of their brevity and discontinuous character.

The recto columns vary somewhat in size, but average $20 \times 20 \mathrm{~cm}$. ( 8 in. square). The writing is frequently carried beyond the framing lines.

In each column of the recto the number of lines is on the average about thirty to thirty-three; but the number is very irregular, ranging from forty-three in one column to five in another.

## III. CONTENTS.

As has been stated above, the MS. is a compilation. An analysis of the contents will be found on page 14. From this it will be seen to consist mainly of directions for divination processes involving numerous invocations, together with erotica and medical prescriptions, in which, however, magic plays as large a part as medicine.

The MS. is far from being unique in regard to its contents. Fragments of similar works in demotic exist at Paris (Louvre, No. 3229, published by Maspero, Quelques papyrus du Louvre, 1875), and at Leiden (I. 384 verso, Anast. 75 , published by Leemans, Mons. du musée de Leide, 1842, pl. ccxxvi-vii) a MS. partly demotic and partly Greek, the latter portion being published by Leemans in Pap. graeci mus. lugd. bat. 1885, ii. Pap. V, and re-edited by Dieterich, Pap. Mag. Mus. Lugd. Bat. The Greek papyri containing similar texts are numerous, many examples having been pub-

[^1]lished from the museums of Berlin, Leiden, London, and Paris by Goodwin, Parthey, Leemans, Wessely, and Kenyon.

The well-known codex of the Bibliothèque Nationale published by Wessely, Denkschr. Kais. Ak. Wiss. Wien, xxxvi. ı888, contains a few invocations in Old Coptic along with the Greek (cf. Griffith, A. Z. 1901, p. 85, and bibliography, ibid. p. 72).

Magic was from the earliest times largely developed by the Egyptians in relation both to the dead and the living. Under the former head fall both the pyramid texts and other texts found in the tombs, including most of the Book of the Dead, which consists mainly of magical invocations intended to make smooth the path of the deceased in the next world.

Magical texts for the use of the living are found in the Harris magical papyrus (ed. Chabas, 1860), the Metternich stela (ed. Golenischeff, 1877) and kindred stones, the Berlin papyrus edited by Erman (Zaubersprüche für Mutter u. Kind, r90ı), \&c. Reference may be made to the volume on Egyptian magic by Dr. Wallis Budge, 1899, and to a special study on vessel-divination by E. Lefébure, 'Le vase divinatoire,' in Sphinx, 1902, VI. 6I seq. Cf. also Dieterich, 'Abraxas'; Kenyon in Cat. Greek Pap. in B. M., I. 62 seq.; Miss Macdonald in P. S. B. A., xiii. 160 seq.; Wünsch, Sethianische Verfluchungstafeln aus Rom. \&c.

In the closely allied department of medicine, it is sufficient to refer to the Ebers papyrus, the Kahun papyri, and the Berlin medical papyrus (ed. Brugsch. Rec. Mon. pl. 87-107), which offer many parallels. Among the Greek medical writers it is noticeable that Alexander of Tralles seems much more closely allied to the Egyptian school, if that be represented by our MS., than Galen.

But though the subject-matter of the MS. is not without its interest for the history of magic and medicine, its chief claim to publication lies in its philological interest. From the first its numerous glosses have attracted the attention of scholars, and have been the means of fixing the value of a large number of demotic groups. Further it is in date probably the latest known papyrus written in the demotic script; most of the glosses are really Coptic transcriptions, and under this head may likewise be included all the Egyptian words written in cipher; so that the MS. in these furnishes us with a series of very early Coptic words, including several grammatical forms of great interest. Possibly too the text may be of importance in relation to the question of dialects in pagan Egypt; but that is a subject too little worked out at present to allow of definite statements. The vocabulary is very extensive, and includes a number of Greek words, the names of over 100 plants, besides numerous animals and minerals.

## IV. PREVIOUS WORK ON THE MS.

It may be useful to record here the names of those who have dealt with the MS. at greater length than a mere passing reference or quotation, and to whom we are indebted for many suggestions:-

As the London portion of the MS., which in the order of contents is the first part, was published fifty years later than the second part at Leiden, it follows that each publication has an independent numbering of the columns, starting from 1 . In view of the fact that there are many references in demotic literature already to the columns by their numbers as established by the publications of Leemans and Hess, it would have been desirable to retain the existing numbering if possible. But, as will be seen by comparison of the hand copy of the whole MS. which accompanies this edition with the former publications, the changes in the way of consolidation of the columns, and in some cases necessary re-numbering of the lines, have made it compulsory to introduce a new and continuous numbering of the columns. For instance, Hess col. X and Leemans col. I form a single column, and the same is the case with Leemans cols. II and III and cols. IV and V, and with verso, cols. XVI and XVII, XXII and XXIII. A comparative table of the old and new numbers will be found at the end.

## V. THE GLOSSES.

There are about 640 words with transcriptions in Coptic characters in addition to a few inserted in the text.

Besides all the letters of the Greek alphabet we find the following used:-
f ( $=$ R $26 / 15$ ).
と ( $=$ R $7 / 33,25 / 34$ ).
h ( $=\boldsymbol{\lambda}$ 25/34, 35 text).

3 (= WI $/ 25,8 / 9, ~ I 3, V .5 / 9)$.
$\boldsymbol{\lambda}$ ( $=\boldsymbol{y} 2 / \mathrm{I} 8$ ).

$$
6(=\mathfrak{t}: \text { wis } 9 / \mathrm{If}) \text {. }
$$

$$
Y(=92 / 10,9 / 14)
$$

$$
\Lambda(=29 / 14,25 / 34) .
$$

$$
2\left(=2^{2 / 4}\right) \text {. }
$$

$$
h(=\$ 9 / 6,29 / 10) .
$$

$$
\mathcal{L}(=x 2 / 26,29 / 10)
$$

The glosses were undoubtedly written by the same scribe who wrote the demotic text. And it seems that he wrote the glosses before he filled in the rubrics. For the handwriting of the demotic text and of the rubrics is unquestionably the same; and in filling up in red the empty spaces he had left for rubrication, the scribe took occasion to fill in with his red ink occasional lapses in the black writing. In the text this can be observed in e.g. $24 / \mathrm{I}$, the omitted $\sigma$ of the second $\operatorname{str}(?)$ has been filled up in red, and also the omitted determinative in the last word of $28 / 8$, an omitted letter in $p h r 29 / \mathrm{II}$, an omitted word $\dot{s} n$ interlineated in $29 / 12$, and a plural sign in $25 / 26$; and so too the gloss $\boldsymbol{\epsilon} \boldsymbol{\omega} \boldsymbol{\epsilon}$ in $28 / 8$, overlooked when the glosses were originally inserted in black ink.

It is a fact that there is often a considerable difference between the Greek letters in the passages written in Greek and in the glosses (e.g. $\pi \alpha \pi \iota \pi \epsilon \tau o v$ in $15 / 25$ and $15 / 29$ ), but this may be accounted for by the fact that the former are written in a cursive hand with ligatures, while the glosses are carefully written with separately formed letters without ligatures for distinctness' sake in the narrow space between the lines.

The above considerations, however, only show that the text and glosses were written by the same hand in our existing MS. It does not follow that they were written by the original compiler. Max Müller has argued (Rec. tr., viii. 175) that they must be due to another individual since they are mostly in the Fayumic
dialect, while the dialect of the demotic text is 'Untersahidisch' (i.e. Achmimic, so called by Stern). In Rec. tr., xiii. $152 \pi$. he replaces the latter term by a more precise definition: 'Die Mundart steht zwischen Fayumisch u. dem Mittel-ägyptischen von Akhmîm, letzterem näher.' But it is very doubtful whether this distinction between the text and the glosses can be maintained. The only example quoted by Max Müller that distinctly suggests Fayumic is the gloss $\boldsymbol{\lambda} \omega$ and $\boldsymbol{\lambda}$ over a group in $16 / 5$ and $25 / 34$, which he reads as $=(\boldsymbol{\epsilon})$ poor, regarding the interchange of $\mathbf{p}$ and $\boldsymbol{\lambda}$ as evidence of Fayumic dialect. But the demotic group in question does not read $e r-w$, but $m r$ as in $m r-\mathrm{T}$ h ( $1 / 17,2 / 7,14 / 6,28$ ), and the gloss $\lambda \omega$ represents the absolute form of the late Egyptian word which we see in its construct form in Sahidic $\lambda$ еленныe and in $\lambda \in \sigma \omega \nu$ s. From the detailed examination of the dialect (in vol. ii) it appears probable that the dialect of the text does not show any distinction from that of the glosses, and it is not necessary to go behind the scribe of the present MS. and place the compiler earlier. He may well have been one and the same.

## VI. DATE.

Reuvens (u.s. p. 151) placed the date of the MS. in the first half of the third century A. D., and this was repeated by Leemans.

Groff and Hess attributed it on palaeographical grounds to the second century ; but in the light of recent additions to the knowledge of Greek palaeography, and the opinions based on them of Kenyon, Grenfell, and Hunt (see A. Z., xxxix. (1901) p. 78), the third century must be accepted as the date of the MS. But this, of course,
is the date at which the papyrus was written, and merely furnishes a terminus ad quem for deciding as to the date of the contents.

That the whole of the papyrus, in its present state, was written by one and the same scribe-with the possible exception of verso XXVIII-can scarcely be a matter of doubt to any one who has studied closely the handwriting of the original MSS. It must be stated, however, that Reuvens and Leemans were of opinion that the glosses were written by a later hand than that of the body of the text: but this question has been discussed above (p. 9), and apart from the identity of ink, and the material proof given there, it may be added that the hieratic glosses in $27 / 8$ are certainly written by the same hand as the numerous hieratic passages scattered through the text.

The date of the contents is a much more complicated question. Written partly in hieratic, partly in demotic, and partly in Greek, they wear the aspect of a compilation, which is borne out by the varied and disconnected nature of the subject-matter.

It has been suggested that the work is a translation into demotic of a Greek original, and perhaps this is the first question demanding discussion. Prima facie it may be said to be likely, as so many similar works exist in Greek. The introduction of three invocations of considerable length written in Greek characters almost compels us to accept that origin for those particular sections, viz. 4/ז-19, 15/24-3I, 23/7-20. It seems probable that the translator felt he could transfer to Egyptian the prescriptions and preparations, while the formula of incantation had to be left in the original language. Had these sections been written in Egyptian originally, it is not likely that an incantation in a foreign tongue would be inserted in the place presumably of an Egyptian one.

And in the first named instance there is the additional evidence of two true Greek glosses, i.e. not Coptic transcriptions of the demotic words, but Greek equivalents of the two words 'table' and 'goose,' which seem to be inserted clearly to prevent a misunderstanding of the original terms. In the second instance $15 / 24-31$, the original Greek lines 25-28 are immediately followed by a demotic translation of the same passage (1l. 29-31), which points in the same direction. Translation from the Greek is rendered probable, outside the passages already referred to, by the transcription of Greek prescriptions and substances in $24 / \mathrm{I}-25$, and verso I, II, VIII, IX. According to an ingenious suggestion of Max Müller, in verso II the otherwise unintelligible phrase $m$ nes $n \mathrm{rm}$ is almost certainly a mistranslation of $\mu \alpha \gamma \nu \eta \sigma_{i}^{\prime} \alpha a^{\alpha} \delta \delta \rho \in i ́ a$. Max Müller has also (Rec. tr., viii. ${ }^{1} 75-6$ ) given strong reasons for regarding the passage 25/23-37 as being translated from a Greek original. However, even where there are reasons for believing that the demotic is a translation from the Greek, the original source, in relation to magic at any rate, was probably Egyptian-certainly so in the case of the Greek passage in $15 / 25-28$, which has itself clearly an Egyptian origin.

On the other hand, some of the chief sections of the MS. show no traces of Greek influence, e.g. cols. VI and XV. I-20; but it would be rash to say that they are older ; they may well represent only a purer Egyptian source. Max Müller (Rec. tr., viii. I $7^{2}$ ) has suggested that some of the magic formulae go back to the period from the Eighteenth to the Twentieth Dynasty. This cannot be true of more than a few phrases. The language indeed is not entirely uniform, but throughout the papyrus the vocabulary and grammar are distinctly not 'Late Egyptian'; they are 'demotic,' and that too
of a kind which approaches Coptic much more closely than in any other known papyrus. Certain passages, such as the spell in $13 / \mathrm{I}-\mathrm{IO}$, show more or less archaism, but in all cases it is mixed with late forms.

The use of hieratic might be thought to indicate some antiquity where it occurs. But the writing is a strange jumble; the hieratic is inextricably though sparingly mixed with the demotic, a single word being often written partly in hieratic, partly in demotic. Where hieratic signs occur the language is not generally more archaic than when the demotic is pure. In 23/24 the word Abrasax is written in hieratic. Now Abrasax is usually regarded as a typical gnostic invocation name, Irenaeus having stated that it was invented by Basilides (fl. 125 A. D.). This statement is now generally regarded as an error, and the name may be earlier; but there is no authority for placing it in pre-Christian times (cf. Hort, s. v. Abrasax, in Smith, Dict. Christ. Biog.; Dieterich, Abrasax, p. 46 ; C. Schmidt, Gnostische Schriften in Kopt. Spr., 1892, p. 562).

Not many documents written in hieratic have been ascertained to be later than the first century A. D.; but they were plentiful at Tanis amongst the burnt papyri found by Professor Petrie in the house of 'Bakakhuiu' (Asychis), the destruction of which Mr. Petrie was disposed to date to 174 A. D. (Tanis, i. p. 41) ; and Clemens Alexandrinus (Strom. v. 237) mentions hieratic as still taught in the schools (circa A. D. 160-220). Hieroglyphic inscriptions, with the name of Decius (249-251), are found in the temple of Esneh, and the existence of hieroglyphic almost implies that of hieratic.

Judging by the language, it is difficult to believe that any part of the work in its present redaction is more than a century or two older than the papyrus itself.

The contents of the papyrus may be classified as follows :-
I. Divination-
(a) by the vessel of oil I-III, IX-X. 22, XIV, XVIII. 7-33, XXI. 1-9, XXII (?), XXVIII, verso XXII, verso XXVI.

## EXPLANATION OF SIGNS

Translation.

Restorations are placed in square brackets [ ]. Lacunae in the original, for which no restoration is suggested, are represented by dots. Words in round brackets ( ) are not in the original, but are added by the translators; those between angular brackets 〈 > are intended to be omitted.

The second person singular has been rendered by 'thou, thee' in invocations, by 'you' elsewhere. In the very few instances in which the second person plural occurs, it is indicated by the use of 'ye' or 'you' (plur.); (bis) following a word indicates that the word is followed in the original by the sign $s p s n$, implying that the word or phrase is to be repeated.

An accurate transcription of the magic names is given in the transliteration; in the translation we have rendered the sound approximately without strict adherence to any one system, generally following the glosses where they exist, as it was thought that this' would be the most useful course for such readers as are not Egyptian scholars.

## Transliteration.

For the system, see note preceding the demotic glossary. Words transliterated with Coptic letters between asterisks are written in cipler in the original.

## REFERENCES.

In referring to the plates of the papyrus in vol. ii, Col. I. I. I is quoted as $1 / \mathrm{I}$ and verso, Col. II. 1. 3 as V. 2/3, \&c.

1. 2. Restore from $18 / 7$. The parallel text to $11.1_{3}-17$ shows that more than half of the page is lost, but the heading line was probably not of full length. Pr-mze is merexe (Oxyrhynchus), capital of the nineteenth nome of Upper Egypt.
 nepecerrm (Pelusium), but the ${ }^{\prime} r(?)$ sign is perhaps too upright, and it is more likely that the two signs following $\operatorname{Pr}$ are a special group for some divine name. Nothing is known of the religious importance of Pelusium, or even of its name in Egyptian, but the city is mentioned in a Greek invocation quoted below at l. 12 .
1. 3. sh(?). This group, here in the plural, may represent $\int^{1} \frac{s^{s} h}{}$, 'toes' (Lange, A. Z., 1896, 76). Cf. Lepsius, Todtenb., c. 42, l. 9 izw $z b \cdot w-i \operatorname{sh} h \cdot w-i \quad m$ ercizw (sic) $c_{n h} h$, ' my fingers and toes are as rearing serpents.' But the same group recurs in $7 / 2$ as a masc. sing. subst. where the context rather suggests the meaning 'testicles.'
${ }^{\text {c }} \mathrm{n}$ h. t , of a serpent, cf. $12 / \mathrm{I} 7$; in Egyptian Pleyte, Pap. Tur., cxxxii. 4 and (very late) Mar. Pap. Boul., I. Pl. 9, ll. 5-6. It seems to mean 'darting forward for attack.' Similar meanings, 'rise,' \&c., are common, esp. in late texts, Br., Wtb., 198-9; cf. also 9/16, 10/7. But in Griffith, Tell el Yahudiyeh, xxv. 15 , an enraged serpent enh $n f \cdot w-f$ ' breathed its vapour' at a god, ' $n h$ being there a transitive verb surviving in Sah. arщ-тнr' 'breathe,' Bsciar, Rec. tr., vii. 25 (Job ix. 18).

sr-my-srpt. The same signs recur grouped together in varying order as a divine appellative in $9 / 6$ and $\mathbf{I} / 8$. The knife $\longrightarrow$ and hide I are the zodiacal signs of Leo and Aries (Brugsch, Nouv. Rech., p. 22 ) ; the flower or seed-head is the peculiar determinative of the capnot throughout this papyrus. The same divine name, composed of a lotus bud (?) © with lion and spelt-out name of ram (sriw), occurs in Leps., Todt., cap. 162, 1. 5, variants giving srpd for the lotus bud (?) (Br., Wtb., 1265 ) and $m^{\prime} y$ for the lion (Leyd. Lijkpap., No. 16). Cf. also Pleyte, Chapitres Suppl., Pl. 14 and riz. The group of a lotus leaf, lion, and ram is figured on several hypocephali, the best example being in Budge, Lady Meux Cat., 2nd ed., Pl. VI. Cf. Pleyte, ib. text, Pl. opp. p. 60. Probably none of these instances are earlier than the Persian invasion. Outside our papyrus the normal order is evidently lotus-lion-ram, and Greek versions agree with this: Brit. Mus. Pap. CXXI. 1. $499 \varepsilon \gamma \omega \epsilon \epsilon \mu$ o
 in Leyd. Pap. V. col. 3 a, 1. 6, the spelling is varied and corrupt. In each case $\sigma \epsilon \rho \phi o v \theta$ is marked off from $\mu 0 v \iota \sigma \rho \omega$, the latter appearing as one word. On a gnostic gem in the Wilson Collection belonging to
 $\pi \rho a \xi \iota \nu \nu \epsilon \epsilon \pi \eta \nu$. In this combination the lotus (сарпот, see below, $2 / \mathbf{1} 7$ ), the lion (rors, see below, $5 / \mathbf{I I}$ ), and the ram (cpo, see below, $\mathbf{1 I} / 8$ and 14/13, and decan names in Br., Wtb. Suppl., 995) probably all represent solar attributes.

syt $t$ ' $t-k$. The first element is written as the 'serpent' cat in the parallel text and $k$ is bull ( $\mathbf{n o}, 7 / 33$ ), but $t^{\prime}$ seems meaningless. It may possibly be 'the impregnator of the cow,' cf. Budge, Nesiamsu, iii. 6, $p^{\prime} k^{\prime}$ sty $m h^{\prime}$.wet. In Parthey, Zwei gr. Zauberpap., i. 25², we have practically the same phrase introduced into an O. C. context which gives an entirely different meaning, 'I am Osiris whom Set destroyed,' пептаснт тako(е) ; see Erman, A. Z., 1883 , 109 note.
stm, i. e. 'hearing,' or perhaps 'hearer,' but the personal determinative is absent.
l. 15 . Kasantra alone without rגo appears in the demotic of both texts, suggesting a reminiscence of the prophetess Cassandra.
3. 16. srrf the hieroglyphic sfr of II Beni Hasan, Pl. IV, a winged quadruped with raptorial beak. The srrf is described in Kufi, xv. x seq., as 'the image (?) of god (?), the king (?) of all that is in the world, the avenger that cannot (himself) be punished; his beak is that of the falcon, his eyes those of a man, his limbs of a lion, his ears of a . . ., his scales of a water-. . ., his tail a serpent's.' Further, he is the mightiest of beings next to God, has authority over everything on earth like Death, and is the instrument of God's vengeance.
l. 17. sq, cf. $6 / 19$ for the complete phrase. The meaning 'drawl' is not quite certain. It must be some artificial way of speaking, such as whining or muttering, cf. $7 / 3^{2}$ and Leyd. Pap. Gr. No. 2 r, text, pp. $21-2$, the reading $P$-ers to be corrected to $p-m r-{ }^{-} / 2$; the Greek nominative shown in Grenf. Amh. Pap. LI. 5). The religious significance of this appellation, 'the good oxherd,' is not clear, nor has it been traced in early texts; from $2 / 7$ it is clearly applied to Anubis, and perhaps dogs were used for herding cattle in Ancient Egypt? It is probably equivalent to Gk. жо九цך , for which see Goodwin, Cambridge Essays, $185^{2}$, p. 26, B. M. Gr. Pap. XLVI, l. 3r. (I) An inquiry of the lamp. You go to a clean dark cell without light and you dig a new hole in an east wall (2) and you take a white lamp in which no minium or gum water has been put, its wick being clean, and you fill it with clean genuine Oasis oil, (3) and you recite the spells of praising Ra at dawn in his rising and you bring the lamp when lighted opposite the sun and recite to it the spells as below four times, (4) and you take it into the cell, you being pure, and the boy also, and you pronounce the spells to the boy, he not looking at the lamp, his eyes being (5) closed, seven times. You put pure frankincense on the brazier. You put your finger on the boy's head, his eyes being closed. (6) When you have finished you make him open his eyes towards the lamp; then he sees the shadow of the god about the lamp, and he inquires for you (7) concerning that which you desire. You must do it at midday in a place without light. If it be that you are inquiring for a spirit damned, a wick of sail-cloth (?) (8) is what you put in the lamp and you fill it with clean butter. If it is some other business, a clean wick with pure genuine oil (9) is that which you put in the lamp; if you will do it to bring there is mentioned a book for shr 'hy, 'overthrowing (or laying) demons'; cf. note $3 / 25$.

1. 9. lbs. There is a fish called $\lambda_{\varepsilon} \beta$ las; and there is the modern لبيس. On the latter Mr. G. A. Boulenger kindly furnishes a note, 'the lebis is the Arabic name of Labeo Niloticus, a fish allied to and not unlike our carp. Like the latter, without being absolutely black, it may be of a very dark olive brown above.'
$y b$ probably has a definite meaning, but as yet it is obscure.

The snake as word-sign has six loops here and in $21 / 4$, four loops in 1. ı6. This agrees with the snake determinative of scy which has usually four loops, once ( $19 / 12$ ) six loops, and twice ( $3 / 3,5 / 9$ ) two loops, and Shoi is said to be 'in Nun' $2 / 5$. It is thus the snake of Shay. But the sign, meaning distinctly a (sacred) snake, cannot read šy, which always means distinctly a divinity. Hfe is perhaps the most probable reading, see esp. 21/4; the det. of that word in $9 / 20$ has only two loops, but in Louvre dem. Mag. iii. 9 five or six loops. Syt 14/3, V. 27/1 has four loops, but the head seems to be raised high; $s y t$ is derived from Eg. $s^{3}-t^{\prime}$ which is represented by $\overparen{\bigotimes \Omega}$ in late texts, Br., Dict. Geogr., 762.

1. s6. bre: cf. Awwpe, 'intumescere,' Gope, 'fastuose se gerere,' or better heps, 'juvenis.'
${ }^{n} h$ is evidently the serpent word met with in $1 / 3$. Possibly both $b r e$ and ${ }^{n} h$ are adjectives, and the construction may resemble the familiar Coptic construction with adjectives, Sт., § 187.

This passage to the end of the column is repeated in $27 / 1-12$.

1. 23 . hty $h n[t]$. The parallel $27 / 2$ gives in hieratic $h t$ followed by the nose hnt and the det. of a boat. ht means 'float down the river,' 'go north,' and hnt, 'sail up the river,' ' go south.' With this clue it is easy to read in Leemans' facsimile the verb hty in demotic, written as in the word $m h t y$, V. I, with its proper det. of water, and following it the verb $h n t$, also in demotic, with its proper det. the boat. Thus, though Leemans' facsimile cannot be confirmed owing to the wear of the papyrus, it is clear that we have a compound expression $h t y-h n t$, 'go down and up.' This is the proper order for the two verbs, as is shown by $h n m h d m h n t$, 'rowing to and fro,' in the Westcar Papyrus, V. 4. It of course refers to the sinking to the horizon and rising to the zenith of the sun-boat.

Bubastis, who have come out of your shrines,' and below, V. 33/5; I Kham. iv. 7 ; Griff., High Priests, p. 109.
l. І5. ${ }^{\mathrm{m}} \mathrm{m}^{\mathrm{c}} \mathrm{m}$. Cf. $13 / \mathbf{1 1}, \mathrm{I}_{3}$, and in cipher euree $24 / 34$, V. $3^{2 / 2}$. This must be the shrew-mouse. Here it appears connected with Letopolis, where the shrew-mouse was sacred to the blind Horus (Renouf, P. S. B. A., viii. $\mathrm{r}_{55}$ ). In $\mathrm{r}_{3} / \mathrm{r}$ i the animal is prescribed to produce blindness, and in $\mathbf{1 3} / \mathrm{I} 2$ and $24 / 34$ it produces death in a man, and in V. $3^{2 / 2}$ erotic feeling in a woman. The $\mathrm{c}_{m} \mathrm{c}^{\mathrm{m}} \boldsymbol{m}$, with determinative of an animal, is prescribed in Pap. Eb. 9I/10; and in Pap. Kah. 7/9 the remains of a determinative will suit very well the picture of a mouse. It is curious that the cipher writing yielding ceure (which is certainly the same creature, cf. $13 / 19^{-2 r}$ with V. 32) makes its name almost identical with Sah. денкм, which in Sap. $12 / 8$ corresponds to $\sigma \phi \hat{\eta} k \in s$ of LXX. In Coptic, however, the shrew-mouse is a $\boldsymbol{\lambda}_{\mathbf{I}} \boldsymbol{\lambda}$ : a $\boldsymbol{\lambda}_{\mathbf{I}} \boldsymbol{\lambda}_{\mathbf{r}}$ (Pexr., Lex. and Gramm.). The $\mu v \gamma^{2} \lambda o s(s i c)$ is prescribed several times in Pap. Bibl. Nat. in à $\gamma \omega$ jai.

Shym (Bor-uyrce) and $9 y \cdot t$ are both names of Letopolis in the Delta. The last group in the line looks like $c \notin i$, but is probably intended for $w<d i$.

1. Io. trot (?). The determinative of a star must mean that the planet form $H r-p-k$, a bull-headed man standing with was-sceptre, is intended, Br., Thes., p. 68. With regard to the reading, the sign is the det. of twet in Bul. Pap. I. Pl. 37, 1. 14, and in l. I5 stands for two. Trot, 'figure,' seems to be the reading here, and wherever it occurs with the det. of divinity ( ${ }^{5} 5 / 10$, \&c.) ; but without det. 1. 20. The demotic sign for $\Omega_{\Delta}$ at the end apparently stands for $h b s$, ' lamp.'
1. 26. $\theta$ web $a$ : cf. $14 / 32$.

You recite these things down into the head of the boy, he looking (I6) towards the lamp. Do not let him look towards another place except the lamp only; if he does not look towards it, then he is afraid. (17) You do all these things, you cease from your inquiry, you return, you make him close his eyes, you speak down into his head this other ( 18 ) invocation which is below, that is, if the gods go away and the boy ceases to see them: 'Arkhe-khem-phai, Zeou, (19) Hele, Satrapermet, watch this boy, do not let him be frightened, terrified, or scared, and make (20) him return to his original path. Open Teï (the Underworld), open Taï (Here).' I say it that this vessel-inquiry of the lamp is better (2I) than the beginning. This is the method again; its form: you take a new lamp in which no minium has been put and you put a wick of (22) clean linen in it; you fill it with genuine clean oil; you place it on a new brick, you tnake the boy sit on another brick (23) opposite the lamp ; you make him shut his eyes, you recite down into his head according to the other method also.

Another invocation which (24) you recite towards Phre in the morning three times or seven times. Formula : 'Iotabao,Sokh-ommoa,Okh-(25)-okh-Khan, Bouzanau, Aniesi, Ekomphtho, Ketho, Sethori, (26) Thmilaalouapokhri may everything succeed that I shall do to-day,' and they will (?) succeed. If it be that you do not apply (?) purity to it, it does not succeed ; its chief matter is purity.

Another (27) invocation like the one above again. Formula: 'Boel,' (thrice), ' I, I, I, A, I, I, I, A, Tat (thrice), he who giveth the light exceedingly, the companion of the flame, he of the flame which does not (28) perish, the god who liveth, who dieth not, he who sitteth in the flame, who is in the midst of the flame who is in the lake of heaven, in whose hand is the greatness and might (29) of the god, reveal thyself to

Here a. $\cdot$ re-s is taken as a relative attached to $z$ as regularly in other demotic lexts (I Kham. v. I, \&c.) ; the $n$ before $f k s \cdot t$ is omitted. fy is taken in the sense of 'fly' (see Griff., H. Priests, p. 178, note to l. 19), and fks.t as possibly an Egyptian rendering of $\sigma \phi \dot{\eta} \xi$. The Coptic corracs, meaning an aqualic (?) animal of some kind, can hardly be the same word for phonetic reasons; for the form of the $f$ see 1. 21. The word recurs in 21/7.

be left out of the question, the fact that both in $21 / 27$ and $21 / 41 \quad s$ is written over $n \theta$, as if by an afterthought, suggests that $n e$, which is identical in spelling with ra the auxiliary of the future, must be the verb na, 'go' (attaching itself to nor : nors, 'futurus esse '), as opposed to ннод, 'come' (which is qualitative of er ; see Kabis, A. Z., 75. 107). rid is practically the qualitative of wue (Stern, § 348). The correction of ne to $\check{s}$ in both passages would therefore be particularly remarkable. Although, according to Steindorff, $\S{ }_{2} 51$, the qualitative is admissible in the conjunctive it seems difficult after щante-: hence no doubt the correction; but if it be possible, the meaning would be 'until she be going,' while $\xi$ expresses 'until she go.' Behold, another form of it again. You take the boy to an upper lofty (21) place, you make him stand in a place where there is a large window before him, its opening looking to the East where the sun shines (22) in rising into it ; you paint the boy's eye with the paint which is prescribed for it, you recite to him . . . . times or seven times; you stand over him; you make him (23) gaze before the sun when it fills the uzat, he standing upright on a new brick, there being a new linen robe behind him (?), and his eyes being closed; (24) you recite down into his head; you strike on his head with your finger described above; you offer frankincense (?) before him ; when you have finished, you make him open his eyes, (25) then he sees the gods behind him (?) speaking with him.
[The ointment] which you put in the boy's eyes when he goes to any vessel-inquiry of the sun (26). You take two .... of the river both alive, you burn one of them with vine-wood before the sun, you put the blood of the other to(?) it, (27) you pound it with it with myrrh, you make them into a pill, they measuring one finger (in length) ; you.... put into his eyes; you take a kohlpot (?) of . . . . . . and a kohl-stick (?) of (28) lel(?). You pound this drug with a little set-stone (?) of Ethiopia and with Egyptian vine-water; you fill your eyes with it, you (29) fill your eyes with this drug, you look towards the sun when it fills the uzat, your eyes being open towards it; then he appears to you, he gives you answer (?) Then she has a passion for you.
(Io) You put its gall into a cup of wine, then she dies (II) instantly ; or put it in meat or some food.
( 12 ) You put its heart in a ring of gold and put it ( 13 ) on your hand; then it gives you great praise, love, and respect.

## Verso Col. XXXIII.

(I) Horus . . . . . . . he was going up a hill at midday in the verdure season, mounted on a white horse . . . . . . . on a black horse, (2) the papyrus rolls [of . . .] being on (?) him, those of the Great of Five in his bosom. He found all the gods seated at the place of judgement (3) eating [of the produce ?] of the Nile (?), my (?) Chief.

For Horus on horseback, cf. Plut., de Is. et Osir., c. 19.

1. 2. hms.t: probably as Ach. quact (as used for infinitive in 1. 6) rather than qeucнобт.
1. 3. $h^{c} p\left(\begin{array}{l}\text { ? }\end{array}\right)$ : cf. 1.6 and V. $5 /$ 1. A feminine word similarly spelt is found in connexion with embalming in BRUGSCH, Thes., 893, 895.

5. n sp VII [nte-k th]s t-t-f he•t-f rt-f nte-k mt-t ar-f

Probably the word here, with divine determinative, is different, and may well represent $H^{\prime}$ 'p, 'the Nile.' The same group occurs in Pap. Insinger $16 / 21$.
pe wer is difficult, 'belonging to the Great,' or 'son of the Great,' or ' my Great one.'
apaes: cf. note $\mathbf{I} / \mathbf{2 0}$.

1. 5. ne: probably fut. neg. me.

XVI $n$ Ne-tberw.ze: cf. $2 / 9$ note; perhaps ou $\delta \epsilon \kappa a \epsilon \xi$ yıvavтєs of Berl. Pap. (Parthey), II. roz. There were also the 16 cubits of the Nile, and according to one account the body of Osiris was torn into sixteen pieces, Rec. tr., iii. p. 56, v. p. 86 ; other texts give fourteen parts (Plutarch) or seventeen (Rhind. bil. i. p. 3).
l. 6 . $[3] 65$ gods, i. e. one for each day of the year. Cf. the $3^{6} 5$

names of the great god in Leyd. Pap. Gr. V. 4, 32, and the $3^{6} 5$ gods, ib. W. 3,13 .
$n t$ sh.t: erased in original.

1. 7. srrf: probably for srf.
1.8. $n e^{\text {'r }}{ }^{W}(?)$.
$s t e$ : a participle resuming the idea of $s t e$ in 1.6 after the long parenthesis.

## CORRESPONDENCE OF COLUMNS

It has been found necessary to make some changes in the numbering of the lines in Leid. I-V, XVII, and Verso Leid, III, VIII, XXII-XXVI.

OXFORD: HORACE HART PRINTER TO THE UNIVERSITY
/

[^0]:    ${ }^{1}$ Lettres à M. Letronne sur les papyrus bilingues et grecs, par C. J. C. Reuvens. Leide, i830. (Première lettre, Papyrus bilingues.)

[^1]:    ${ }^{1}$ The horizontal lines on the recto are continuous for the whole length of the papyrus.

[^2]:    * The group for ${ }^{n} n y$ is that which spells ne-ene (nanor=) in ordinary texts, but here the ne is superfluous, and in this papyrus a false ne is always written before $\mathrm{c} n e$, so that rarror $=$ has to be written out $n e(-n e)-{ }^{-} n e$. In other texts as well as this we find ne-nfr with a false $n e-$, probably due to the initial sound of $n f r$, and this may have led to the otiose ne before 'ne in the present text.

[^3]:    1. 6. nte $n b$. The reading not quite certain, but extremely probable.
    1. 7. $p q t$. The usual group for $q t$ is very much abbreviated, and is thus identical with that for $w h$, 'wish,' but there can be little doubt of the reading. The meaning must be that the bricks are laid about the boy so that he can stand or sit on them without touching the ground.
    1. 9. $t y k$ can scarcely be other than Sah. taб. The otiose $y$ may be
[^4]:    ${ }^{\circ} m$. This group cannot be read $t m$, т $\omega \boldsymbol{\mu}$. It must be connected with ore, 'clay.'
    l. 27. hyn.w, 'some,' here and elsewhere suggests the meaning of ' a pair' (Hess, Setne, p. 30).

    1. 28. $\mathbf{e}(\mathbf{2})_{\text {aqp }} \mathbf{p}$ croeq, see the chapter on Grammar.
    $e \cdot r e$ : probably the Eg. emphasizing particle $\| \longleftrightarrow$, cf. $7 / \mathrm{I}$.
    The meaning of $h r{ }^{\prime} r-k$, wak, here is not merely consuetudinal but injunctional, equivalent to the old sdmhrf, as used e.g. in Pap. Ebers (Erman, Grammar, 2nd ed. § 22 I ).
[^5]:    ＊Cf．perhaps the inscription on a hypocephalus at Cairo

[^6]:    1. I. e.rry with gloss epe, apparently $=\mathrm{Eg} . \emptyset \longleftrightarrow$, as $e^{3} r e$ in $5 / 28$ : here 'verily' or 'but.'
[^7]:    $K s$ may be Cusae, or Cynopolis (El Qais), or some other town in Middle Egypt.
    'Nine times tried' seems proverbial, cf. $\mathbf{~ 4} / \mathbf{3 1}$; and for the whole sentence, 29/r.

    1. 14. Phe•t, a feline goddess worshipped at Speos Artemidos near Beni-Hasan in Middle Egypt. Lanzone, Diz. Mit., 234.
    1. I5. gelč̌yre, see the Glossary.
[^8]:    l. 28. $n h r(?) t-y^{\prime}(?)$. Perhaps a very incorrect writing for $n h \cdot t-y$, ' before me.'

    1. 29. $p \stackrel{5}{y} y$. Perhaps the 'lake of U-Peke' in $12 / \mathrm{I} 7$.
    1. $3^{1}$. e.'re tm te, єрer更-, but the $t e$ is inexplicable.
    sezve. This seems a threat to burn the bandages or even the mummy of Osiris.
    l. 32. šteco.t, probably the chest, Eg. sty.t, of Osiris, Br., Wtb., 1410.
[^9]:    1. 2. wšt, 'salute with reverence' is the real meaning, not altogether lost in Coptic.
    1. 4. te-y hzey hyt ar-k clearly corresponds to $\epsilon \xi \tau \rho \kappa \iota \zeta \omega \sigma \epsilon$. tsye, gloss esas. as is here probably $=$ short $\mathbf{e}$.
    1. 7. $n h s y \cdot w$ opposed to $n m t \cdot w$. In the Rhind. bil. ' $h z s y \cdot w$, 'approved spirits,' often, vii. 10, xiii. 9, xvii. 2. So perhaps here 'approved,' not 'drowned.'
    cnhe, again with a meaning allied to that in $\mathrm{s} / \mathrm{r}$.
    1. 8. hbs. Hitherto it has been the hin, 'vessel,' not the lamp.
[^10]:    1. 21. $z n f$ : an obscure word; cf. $25 / 32$, V. $7 /$ x. It occurs also in a Philae inscription (Br., Thes., IOI7), perhaps with the meaning of a - small portion.'
    pr.w: cf. perhaps Sah. євра, pl. єєрнгє. It is not clear whether the fruit or the pips are intended.
    1. 22. a hry. The MS. appears to have the $a$, but it must be a mistake of the scribe.
[^11]:    1. 7. карpe: the aspiration of the second $\rho$ is interesting. Cf. note to $1 / 20$.
    1. II. ef $w w^{6} b$ : the lamp must be pure as described in ll. 22 et seqq. $a \cdot w y$, sometimes perhaps written $w y$, is arm, ares $=$, Sт., § 384 , and is synonymous with $a \cdot \cdot n y:$ cf. i7/ro, \&c.
    2. і5. za. ${ }^{r} r=x \in p e, ~ ' f i n a l . ' ~$
[^12]:    1.29. Egg of ibis and hawk, the same collocation in B. M. Pap. XLVI. 24 I .

    1. 3r. e $m n n k g e$, 'there being nothing else,' i. e. nothing not included in my words-a curious expression: cf. emn nge šre, 19/26.
[^13]:    I. 27. ne. This group occurs in a similar phrase in l. 4 I and in l. $3^{2}$, if the reading in the latter instance be correct. If it stands, then ne is difficult to explain; it looks like a preposition 'to,' but if l. 32

[^14]:    1. 28. $p^{2} t$ co.t. It is very rarely that the Ennead is written without the addition of the word 'gods.' The double Ennead of eighteen gods is frequently mentioned from the earliest times onwards.
    l. 29. no. Can this gloss represent a qualitative of mue as o of erpe? The usual qual. is nope.
    $n$ nwe mhrr for $n$ zé $m h r r:$ cf. 14/28, 20/8.
    $h m \cdot t$ (?), 'trade,' 'art '(?).
    1. 30. hyt. In spite of its peculiar form this word can scarcely be other than hyt, both on account of its meaning and of its association with hrey. We may translate 'fury of Phalam,' \&c.
    1. 31. mwes, O. C. щaore, probably from Eg. fem. mis.t, 'liver' or ' kidneys.' $p m h t h m$ named $p$ ky $m b \bar{h} t$ in Pap. Rhind. iv. 6.
[^15]:    1. 21. Read [ $p$ ] $n t e \cdot 9 r-k$, which is required by the space and the meaning. ne-t.t-f: either $-f$ must refer to the lamp, or to the action in general, or else it is a slip for $-k$.
    1. 23. wer.t wene.f: the preparation of the materials would take several days, but they could be kept ready for immediate use.
    1. 24. Bhre seems a likely word, but there is no authority for reading the third sign in the cipher word as $n$.
    $\epsilon$ - $w{ }^{\circ} n h$ does not mean that several hoopoes were required. There were only two birds: see l. 27 .
[^16]:    1. 29. $n n w n b$ : the parallel $5 / 29$, where this is repeated with the next sentence, shows that it cannot mean 'from all sight.'
[^17]:    1. $8 . h n-w$ : this seems to be the reading, cf. 1.12 .
